

Welcome to Herräng!

In Herräng we depend on sensitive groundwater resources for our drinking water. Both quantity and quality of the water is affected by large and uneven water use – especially during summer time when the water resources are low, but the use is very high.

However, together we can contribute to ease the pressure on the water source. We, the local inhabitants, visitors, entrepreneurs, water utility, municipality and everyone else, can value and use the local water supply with care. As a visitor you can contribute!

Simple things that make a difference:

- Don't let the tap run unnecessarily
- Turn off the tap while brushing teeth
- Keep the shower to a minimum. How quick are you?!
- Turn off the shower while applying soap, shampoo
- Keep a jug of water in the fridge instead of flushing water until it becomes cold
- Do you use a dishwasher? Fill it!
- Do not wash dishes with running water – use a bowl
- Take a lovely dip in the sea/lake instead of a shower

Notice a leaky tap?:

- Please inform the landlord or landlady
